ATEMPO UNITED BACKUP EDITION

Atempo

Atempo United Backup Edition (AUBE) offers your company an easy, hassle-free backup solution for all types of servers, applications and databases.

THE CHALLENGES

Have you ever experienced the frustration of not being able to deploy new IT projects because you didn't have the right licenses for your backup solution? Did you have to delay the installation of a new application because the license you had for your backup solution wasn't for the right operating system? Some backup software vendors have inconvenient licensing. In addition to that, some companies have very long, thorough purchase procedures. These factors can make it difficult for IT departments to deploy new project infrastructure.

Sometimes the management of multiple license types is so complex that administrators fail to comply with the rules. When their company is audited by a large software vendor, they face hefty penalties because of licensing infractions.

The setup of a backup solution must be easy. Whether you install it in a new datacenter or you just change the operating system on some servers, it shouldn't impact the IT budget that you prepared so thoroughly at the beginning of the year.

THE SOLUTION

License issues that hamper daily IT work shouldn't exist and can be solved by using the Atempo United Backup Edition.

The Atempo United Backup Edition is intended for companies up to 2000 employees and includes both Time Navigator and Live Navigator. The multi-year license, simply based on the number of employees of the company, covers all your needs in terms of server backup. The Time Navigator compatibility guide covers all the operating systems and all the applications and databases as well. There are no boundaries to the number of modules that can be installed. It also includes Live Navigator, to protect as many file servers as you wish, and ten licenses for laptops and desktops, so that you can experience the same great backup for your workstations.

If you would like to go beyond the protection of your servers and applications, Live Navigator agents can be ordered as an add-on to protect the workstations as well. These agents will connect to the Live Navigator server that is fully part of the AUBE program.

The Time Navigator and Live Navigator solutions have been helping companies for many years.

WHAT

Atempo United Backup Edition (AUBE) program is an "all included" program for the backup of any server, any application and any database.

IT includes Time Navigator and Live Navigator so that you benefit from the latest backup technologies.

TIME NAVIGATOR

An advanced, high-performance backup and recovery solution, Time Navigator is also a powerful and easy-to-use tool for tiered data protection that can fit the data protection needs of large, small, and medium-sized businesses. Whether you manage a few servers, a workgroup, or a multi-location enterprise network, Time Navigator helps you seamlessly manage data throughout its lifecycle.

Time Navigator features:

- Enterprise Scalability - Time Navigator offers unlimited scalability, giving you flexible data protection for a single workgroup or thousands of enterprise nodes.

- A Unique Restore Approach - Time Navigator offers a unique restore approach based on its Time Navigation GUI.

- Heterogeneity: Virtual and Physical servers backup - Time Navigator covers both worlds. In addition to physical servers, it offers an agentless solution for virtual systems, making deployment a breeze.

- Flexible Implementation and Great Restore Speeds - Time Navigator offers the flexibility to backup to disk or tape for easy implementation of optimal data protection architectures.

- Broad Support for Operating Systems and Applications - Time Navigator protects all the major UNIX, Linux, OS X and Windows platforms. It also provides hot backup and recovery options for leading applications, databases, and messaging systems.

- Effective Deduplication - Time Navigator deduplicates and compresses the data at the source to reduce the transmitted volume to a level acceptable for low bandwidth connections. Backups that once took hours can be reduced to minutes. Time Navigator fully integrates with the deduplication engines embedded in the storages.

LIVE NAVIGATOR

Live Navigator provides a standalone, near-continuous data protection solution with advanced data deduplication for remote offices, desktops and laptops.
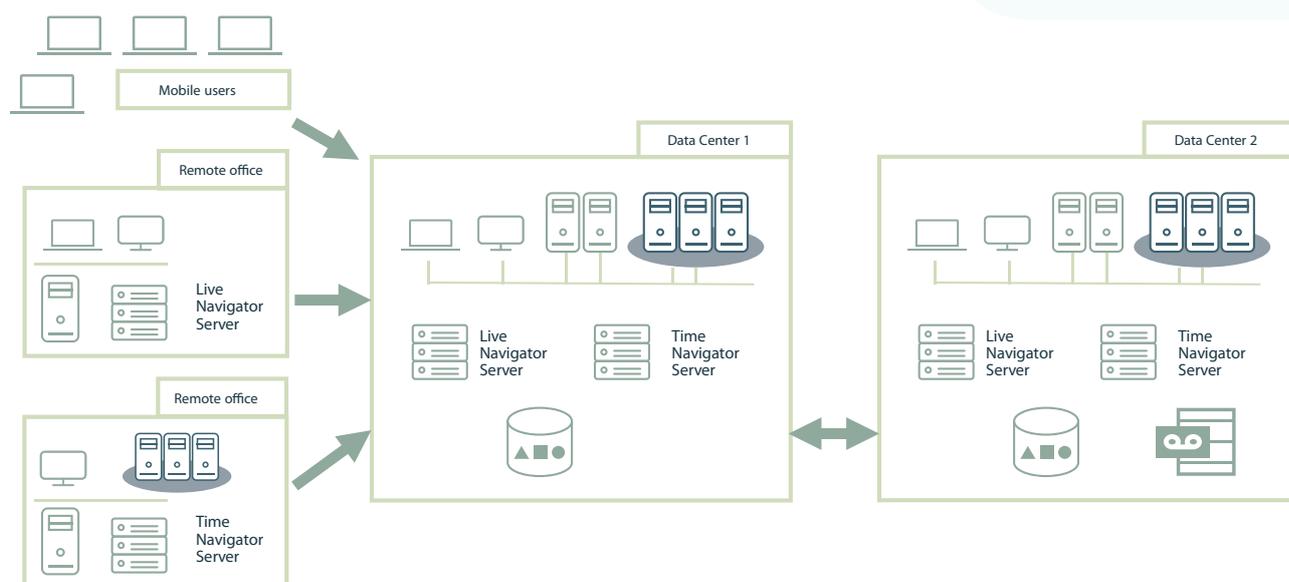

Live Navigator features and benefits:

- It works the way users work, with near-CDP, client-originated backup based on user activity, rather than scheduled backups designed to fit within the operational window of IT.

- Data protection policies that are tailored for types of data stored on PCs, not enterprise applications and databases.

- An easy-to-use wizard and integration with Windows Explorer allows end users to quickly recover their files and folders from any point in time, without having to rely on IT.

- It eliminates duplicate backup data on endpoint devices and at remote offices before it is sent over the network.

- It sends only new or changed blocks to reduce network traffic, making backups more efficient.

It can be managed centrally, simplifying administration of endpoint devices and remote offices from a single location through a Web-based interface.

Time Navigator for the servers and Live Navigator for the workstations are two converging solutions.

A company-wide backup solution.

The benefits of this convergence is because they:

• Are based on one and the same platform

• Share their deduplication system

• Have a web interface with the same look and feel

• Share the same Time Navigation that give users two ways to restore a file in a few clicks.

This program offers a coherent backup for your entire infrastructure.

Atempo

Since 1992, Atempo provides business continuity solutions to secure and preserve essential business data for thousands of companies around the world. Our integrated suite of solutions include our market leading data backup and disaster recovery offerings (Time Navigator and Live Navigator) and our innovative archiving solution (Atempo-Digital Archive) which features intuitive retrieval interfaces and supports a broad scope of platforms. Based on high performance data movers our solutions are extremely scalable. The Atempo products are, therefore, suitable for the data protection needs of midsized to petabyte scale businesses and large distributed enterprises.

Atempo is headquartered south of Paris, France, in Les Ulis with operations in Europe, the Americas and Asia; it has a sales and support network of over 100 resellers, partners and Managed Service Providers (MSP) serving our customers worldwide. Learn more at www.atempo.com.
